

FROM THE MINE TO THE ROAD

Rock Tech Integrates the Battery Supply Chain

Rock Tech Lithium is a fully integrated lithium ChemTech company working to produce battery-grade lithium for the Electric Vehicle revolution.

Lithium resource in Canada

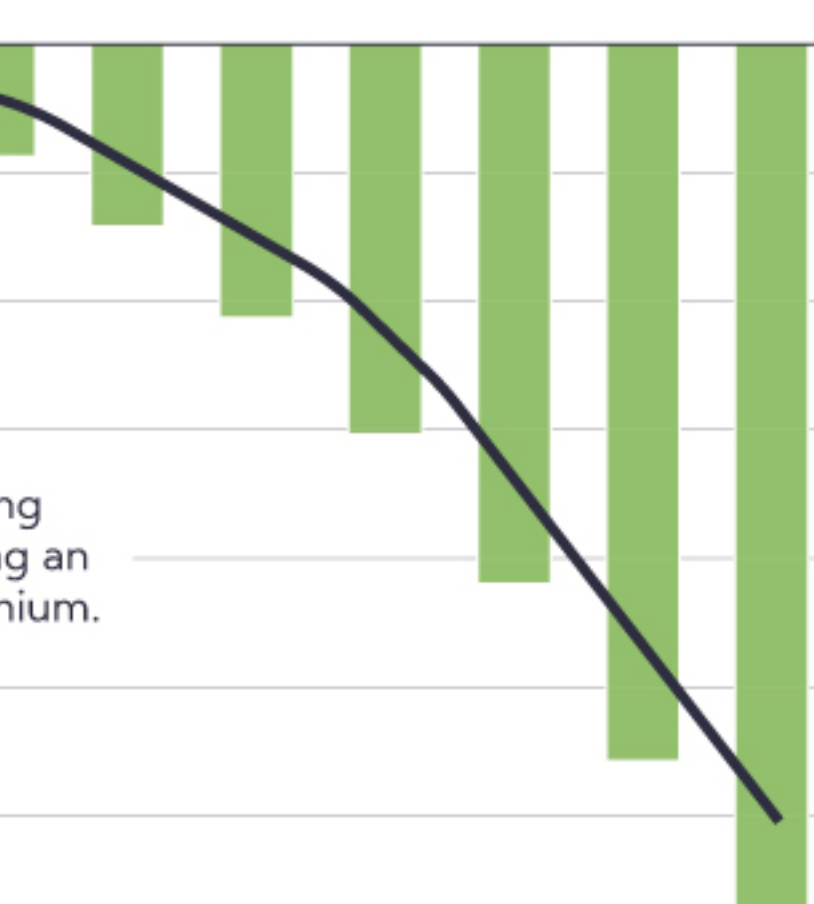

Conversion plant in the EU

The company is building its own supply chain from the ground to final product combining Canadian natural resources with European processing.

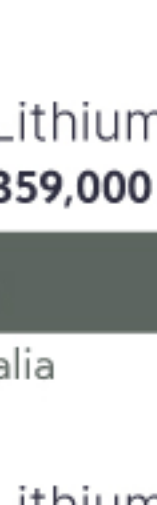

LITHIUM

Powering the Electric Vehicle Revolution

Of all the available EV battery compositions, lithium-ion batteries remain the preferred technology for EV manufacturers into the foreseeable future.

Lithium-ion batteries offer:

High energy density

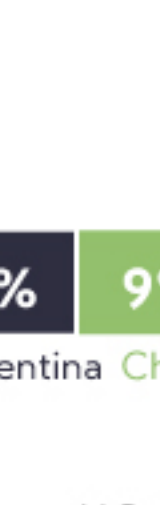

Low self-discharge rates

Low maintenance

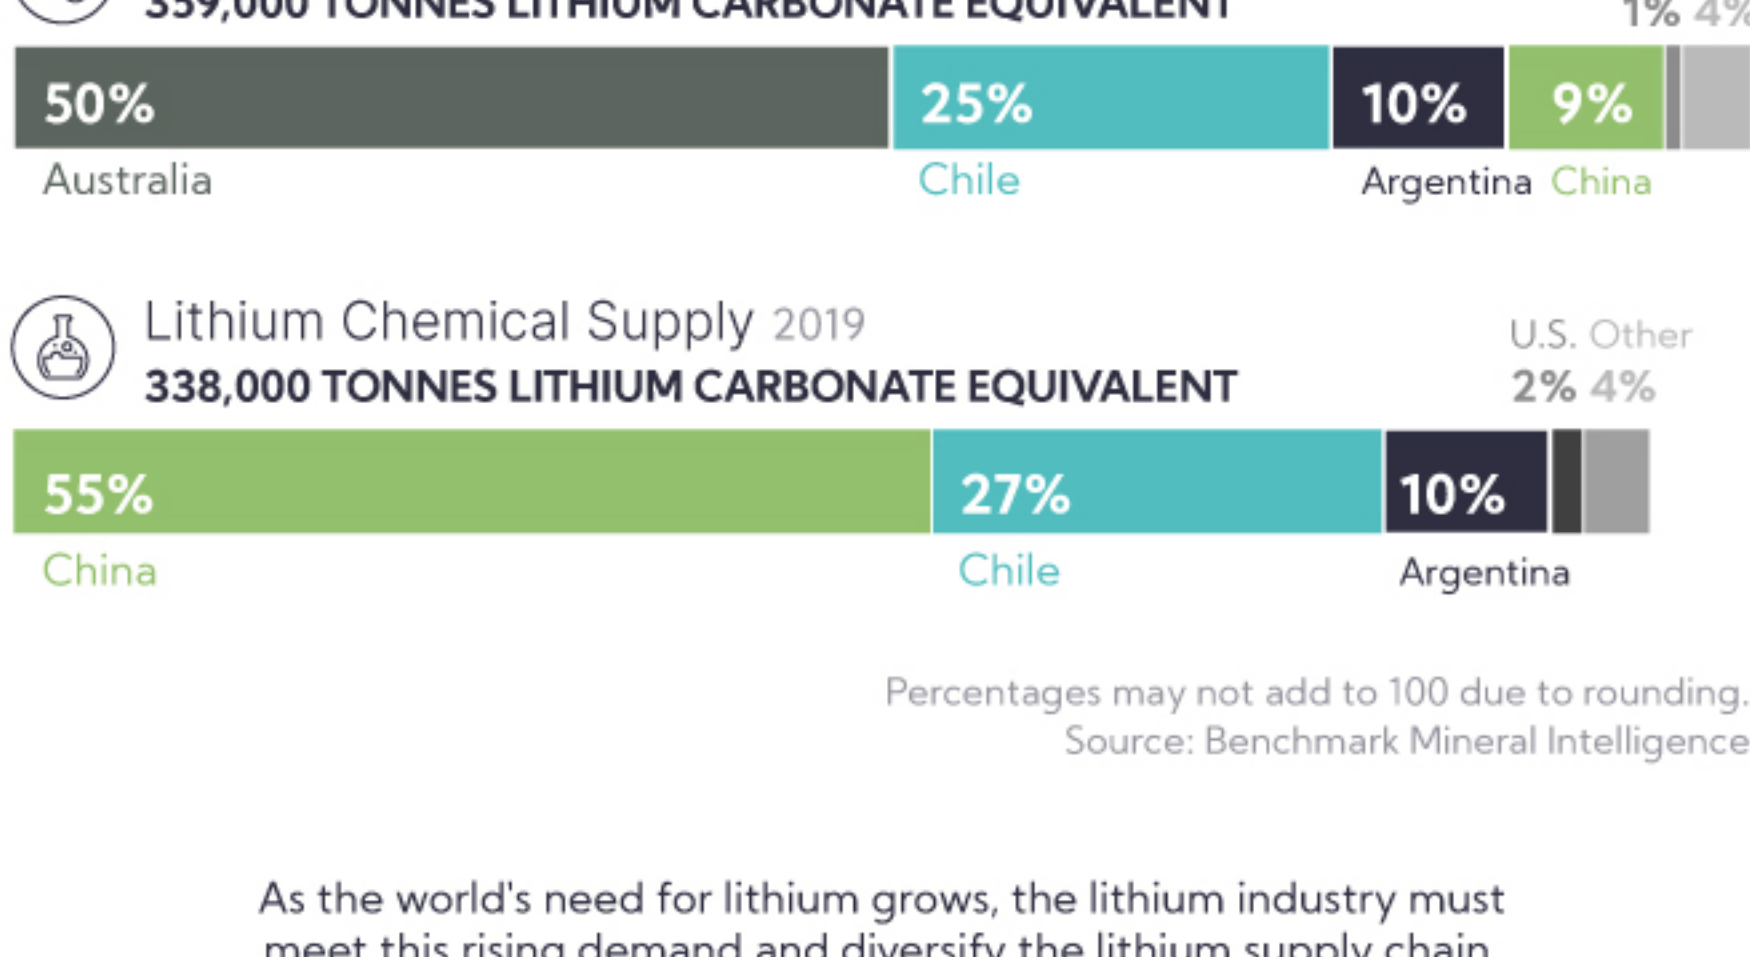

Falling costs

High potential for recycling

Lithium Market Balance

Supply in tonnes of lithium carbonate equivalent

In addition, the current supply of lithium is highly concentrated within a few regions.

Lithium Raw Material Supply 2019
359,000 TONNES LITHIUM CARBONATE EQUIVALENT

Lithium Chemical Supply 2019
338,000 TONNES LITHIUM CARBONATE EQUIVALENT

Percentages may not add to 100 due to rounding.
Source: Benchmark Mineral Intelligence

As the world's need for lithium grows, the lithium industry must meet this rising demand and diversify the lithium supply chain.

The Rock Tech STRATEGY

Developing a sustainable low-cost lithium supply of both the raw materials and the battery grade product, with:

Large lithium resource

Team expertise linking Canada to Europe

Production know-how

Canada Mining and Concentration

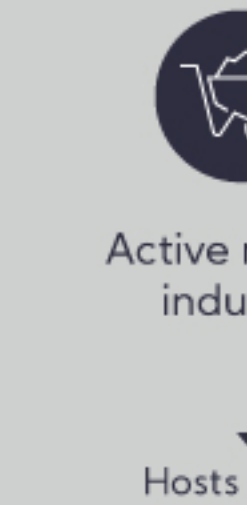

Europe Conversion to Battery Grade

Lithium mine & concentrate
Georgia Lake

Lithium sulphate production
Thunder Bay

Lithium hydroxide production
EU

Rock Tech is a pioneer in producing lithium hydroxide outside China.

Rock Tech is combining the natural advantages of Canada with the production know-how of Europe to deliver lithium to the world.

THE RAW MATERIALS

Lithium Resource in Canada

Rock Tech's Georgia Lake project is a 100% owned lithium spodumene mining project in Ontario, Canada.

The Canadian Advantage

Canada is a resource-rich country with a long history of responsible mineral development. Rock Tech's strategic positioning in Ontario offers several advantages:

- One of Canada's largest mining jurisdictions
- Availability of supplies and infrastructure
- A large skilled workforce
- Active mining industry
- Access to renewable energy

\$497M invested in mineral exploration and deposit appraisal in 2019

Produces more than \$10B in mining supplies and services annually

Mining creates roughly 72,000 direct and indirect jobs in Ontario

Hosts more than 235,000 active mining claims

Ontario's installed energy capacity is 71% carbon free

Sources: Invest in Ontario, Ontario Mining Association, IESO

Delivering the Goods

The Georgia Lake Project

Providing the raw materials for battery-grade lithium production with a significant resource* including:

- Measured and indicated: 6.58Mt grading 1.01% Li₂O
- Inferred: 6.72Mt grading 1.16% Li₂O

*Prepared in accordance with NI 43-101

THE BATTERY PRODUCT

Conversion Plant in Europe

Rock Tech Lithium is building a lithium converter in Europe, making it one of the first lithium hydroxide producers outside China.

The European Advantage

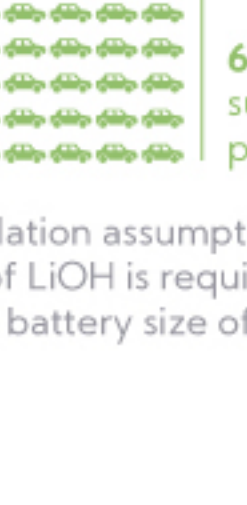

The European Commission has set a goal to reduce greenhouse gas emissions by 55% by 2030 relative to 1990 levels.

As a result, European EV-related production is growing rapidly.

In addition, Volkswagen announced plans to build 6 battery plants in Europe with a combined capacity of 240GWh by 2030.

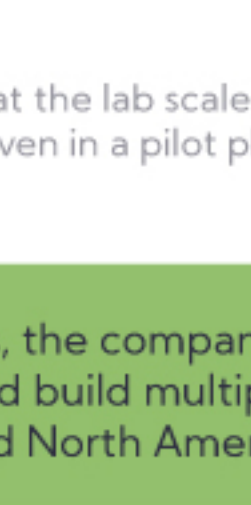

This capacity represents:

>200,000 tons of Lithium Carbonate Equivalent

A 12% increase in global lithium-ion demand compared to 2020 levels

At least 8 converters the size of Rock Tech's

Source: Reuters

To accelerate the EV transition, the European Union is offering:

€6.1B in subsidies to support companies in the battery supply chain

Infrastructure to support the EV industry

Purchasing incentives for EV owners

Source: European Commission, European Automobile Manufacturers Association, DW

Rock Tech Lithium is aiming to deliver lithium to fuel the growing European EV industry.

Processing with Innovation

THE ROCK TECH CONVERTER

The Rock Tech plant will convert the raw materials from the Georgia Lake project, in addition to other sources, into high-purity lithium hydroxide for EV batteries.

In an industry where knowledge is rare, the company has filed patents for a unique conversion technology that offers*:

24,000 tons LiOH production per annum

Higher by-product revenues

Lower energy consumption

600,000 EVs supported per year**

*Results are at the lab scale and need to be proven in a pilot plant.

**Calculation assumptions:
0.60kg of LiOH is required per kWh
Average battery size of 65kWh

Once production begins, the company is expected to scale up and build multiple converters in Europe and North America.

With access to resources, proprietary technology, and advantageous locations, the Rock Tech strategy is built for success.

The Team and Shareholders

Every strategy needs a team to successfully execute the plan.

Board of Directors

Dirk Harbecke Chairman
More than 25 years experience globally in building companies in mining, banking, and technology.

Simon Bodensteiner CEO
Senior mining engineer at Rio Tinto, Deutsche Rohstoff AG and over 15 years of investment experience.

Brad Barnett CFO
Extensive experience in the areas of regulatory filings, compliance, finance, and communications.

Prof. Peter Kausch Director
Former top manager in natural resources and energy sector and Professor of International Management of Resources and Environment.

Prof. Wolfgang Voigt Director
Professor Emeritus in Inorganic Chemistry at the Technische Universität in Germany, with global experience in several large and hard rock lithium projects.

Klaus Schmitz Director
Broad and global experience in the field of Engineering, Procurement, and Construction for both conventional and renewable power generation and industrial plants.

The company also has:

No debt

70% of shares held by long-term shareholders

Prof. Heinz Riesenhuber
President of the German Parliamentary Society and former Minister of Technology.

Carl-Peter Forster
Board member of Geely Automotive and Volvo Cars, Former CEO of GM Europe, and Tata Motors.

Norbert Steiner
Former CEO of K+S AG, a DAX 30 resources company.

Prof. Jens Gutzmer
Director of the Helmholtz Institute Freiberg for Resource Technology and Professor of Economic Geology and Petrology.

With a strong presence from both Canada and Germany, Rock Tech's team and shareholders give it an edge over competitors.

WHY ROCK TECH LITHIUM?

Rock Tech Lithium is integrating all the right elements to become one of the world's first suppliers of both—the raw materials and the refined product for EV batteries.

A fully owned lithium resource in Canada
A conversion plant in Europe
Converter and ChemTech know-how
Proprietary conversion technology*
Experienced team and supportive shareholder base

*Patent pending

FOR A CLEAN FUTURE
Building an integrated Lithium ChemTech company
