

TRACKING THE SURGE: U.S. SOLAR STOCKS RALLY ON TAX CREDIT STABILITY AND SUPPLY CHAIN EDGE

First Solar's Recent Surge: A Deeper Dive into the Solar Sector's Latest Developments

The solar energy sector has witnessed a significant uptick in recent weeks, with First Solar (NASDAQ: FSLR) emerging as one of the biggest gainers. The company's stock has surged **nearly 20% following reports that U.S. House GOP lawmakers have proposed a budget with softened credit cuts for renewables**. According to J.P. Morgan, the revealed portions of the budget reconciliation bill are bullish for solar, wind, and geothermal power providers, as production and **investment tax credits (45X) are set to stay intact through 2028 before gradually phasing out**. We believe this development has alleviated investor concerns over the potential demise of the Inflation Reduction Act tax credits, which are expected to contribute significantly to First Solar's earnings over the next two years. **First Solar's recent financial results have also been a key driver of its stock performance**. The company reported net sales of \$0.8 billion for the first quarter of 2025, with a net income per diluted share of \$1.95. Despite a decrease in net sales from the prior quarter, the company's **gross cash balance stands at \$0.9 billion, with a net cash balance of \$0.4 billion**. We expect First Solar's strong financial position, coupled with its unique profile as America's largest and most established solar module manufacturer, to enable the company to capitalize on the growing demand for solar energy in the U.S. market. The company's proprietary **CadTel-based semiconductor** and significant network of domestic supply chain vendors further solidify its competitive advantage.

Chart 1: FSLR vs S&P 500 (1- Month Performance)

Source: Trading View, Data as on May 20, 2025

The proposed budget has not only been a boon for First Solar but also for other U.S.-based manufacturers like Array Technologies and Nextracker, which have rallied in recent days. However, firms with global supply chains or residential exposure, such as Complete Solaria and Canadian Solar, have lagged. We believe this dichotomy is reflective of the shifting landscape in the solar sector, where **domestic manufacturers with secure supply chains are poised to benefit from the current policy environment**. Further, the recent imposition of anti-subsidy and anti-dumping duties

against Chinese solar manufacturers has also leveled the playing field for U.S.-based producers, allowing them to compete more effectively in the market. In conclusion, we believe First Solar's recent surge is not merely a short-term phenomenon but rather a reflection of the company's strong fundamentals and the favorable policy environment. As the solar sector continues to evolve, we expect First Solar to remain at the forefront, driven by its competitive advantages and commitment to innovation. With an **expected sales backlog of 66.3 GW and a robust pipeline of projects**, we believe First Solar is well-positioned to capitalize on this demand and deliver long-term value to its shareholders.

Solar Tracker Market Poised for Growth: Array Technologies' Strong Q1 Performance and Strategic Advancements

Array Technologies, a leading global provider of solar tracking technology products, software, and services, reported a strong start to 2025, surpassing market expectations for both earnings and revenue. **The company's revenue for the first quarter of 2025 was \$302.4 million, +97% y/y increase from \$153.4 million, exceeding analyst estimates by 14%.** We believe this growth is a testament to the company's solid market share recovery, driven by an 18% contract growth and a strong order book with a value of \$2.08 billion at the close of Q1. Notably, Array Technologies' **adjusted EBITDA increased 55% y/y to \$40.6 million from \$26.2 million**, with a net income of \$2.3 million, a turnaround from a net loss in the previous year. The company's recent performance is particularly notable given the uncertain market conditions, with geopolitical headwinds creating volatility in the solar industry. However, Array Technologies' CEO, Kevin G. Hostetler, stated that the company does not anticipate a significant impact from tariffs, as equipment typically only accounts for about 50% of a utility-scale project.

We note a 15% increase in equipment costs would result in less than an 8% increase in the overall cost of a project. The company's global supply chain outside the U.S. is focused on its center of excellence strategy, which will consolidate purchasing volume with key partners in Asia and worldwide. **We expect Array Technologies to maintain operational agility and deliver long-term value for its shareholders, driven by its diversified supply chain and strategic partnerships.**

Chart 2: ARRY vs S&P 500 (1-Month Performance)

Source: Trading View, Data as on May 20, 2025

Array Technologies has also unveiled **DuraTrack Hail XP**, an industry-leading tracker designed to withstand extreme hail and wind events. This innovative product enhances the company's DuraTrack platform with a new level of reliability engineered specifically for hail-prone regions. Developed with direct input from customers, insurers, and industry partners, Hail XP sets a new standard in tracker resilience. We believe this product will be a game-changer for solar projects in regions prone to severe weather conditions, providing dependable stow performance and reducing downtime and damage. Further, the company's commitment to innovation and customer satisfaction is evident in its product offerings, positioning it for long-term success in the solar tracker market.

As noted, the recent tax proposal unveiled by the House Ways and Means Committee is expected to be beneficial for Array Technologies, with constraints on products from foreign-influenced entities viewed as advantageous for domestic providers in the renewable energy sector. **Analysts at Goldman Sachs said the proposal is "not as negative as initially feared," particularly for domestic clean energy manufacturers.** We expect Array Technologies to benefit from its high U.S. revenue exposure, with the company's U.S.-based manufacturing footprint poised to gain from the foreign-entity restrictions. With a **strong order book**, **innovative products**, and a **favorable market outlook**, we believe Array Technologies is well-positioned for growth in the solar tracker market.

CLEANTECH NEWS

Industry Trends

Community solar could spark \$120 Billion in US economic growth. A nationwide analysis has found that community solar could unlock over \$120 billion in US economic growth by creating jobs and generating local economic activity. A single 5 MW project generates around \$14 million in local economic activity and supports nearly 100 jobs, with a full-scale rollout of community solar potentially bringing in billions of dollars and thousands of jobs to individual states such as California, Wisconsin, Virginia, Ohio, New Mexico, and Washington State. BP green strategy chief out as pivoting oil giant's profits plunge. BP's Head of Strategy, Giulia Chierchia, is leaving the company amidst a significant decline in profits. This departure marks a shift away from BP's previous focus on sustainability under former CEO Bernard Looney's leadership. The move comes as oil prices plummet and the energy giant struggles to adapt to changing market conditions. [Read more.](#) (Recharge)

Meeting Trump's agenda will cost \$100bn and needs policy clarity, says energy storage industry. The energy storage industry has estimated that meeting President Trump's agenda on clean energy will require a massive investment of \$100 billion and clarity in policy. This comes as RWE Clean Energy connects its first utility-scale battery storage project, Fifth Standard, in California, marking the company's largest U.S. storage facility to date at 137 MW. The industry is seeking stability and consistency from policymakers to drive growth. [Read more.](#) (Recharge)

Busting Geothermal myths: The promise & limits of deep closed loop & enhanced systems. Simon Todd, a geologist and expert on geothermal energy, discusses the advancements in deep closed-loop and enhanced geothermal systems (EGS). He explains how drilling through granite is necessary for geothermal projects due to its high temperature and heat transfer properties. Fervo is leading the way in EGS, with a systematic approach to drilling through granite, similar to the shale industry's progress over the past 20 years. Todd also debunks myths about using basalt instead of limestone in cement production, citing its inferior characteristics. [Read more.](#) (CleanTechnica)

Chart 4: A First-of-its-Kind Geothermal Project Between Google and Fervo Energy launched in 2024

Californians could save \$6.5 billion with community solar & storage. A new study commissioned by the Coalition for Community Solar Access finds that expanding community solar and storage across California could save electricity customers \$6.5 billion over 20 years. Investing in 5.4 GW of local solar and battery storage would lower costs, reduce greenhouse gas emissions, and improve grid reliability. The savings come from lower electricity prices, reduced peak demand costs, and avoided transmission upgrades, with benefits extending to all electricity users in California, not just those participating in community solar projects. [Read more.](#) (CleanTechnica)

BNEF slashes US offshore wind forecast 56% on Trump risk. Bloomberg's clean energy research consultancy, BNEF, has significantly reduced its US offshore wind forecast by 56% due to uncertainty surrounding the Trump administration's policies. The revised estimate predicts 17GW of installed capacity by 2035, down from a previous projection of 38.6GW. This reduction highlights the risk and unpredictability associated with investing in renewable energy under current government policies. [Read more.](#) (Recharge)

Buyers' market for wind assets as sales and valuations fall: BNEF. The global market for wind assets has shifted in favor of buyers due to falling sales and valuations. According to BloombergNEF (BNEF), market volatility is making the business case for clean power less attractive, leading to a decline in asset prices. This trend affects not only wind but also solar and battery assets, creating opportunities for investors to acquire these resources at lower costs. [Read more.](#) (Recharge)

US wind PPA market 'resilient and stable' in Q1 despite Trump policy turmoil: LevelTen. The US wind power purchase agreement (PPA) market remained "resilient and stable" in the first quarter of 2020 despite policy uncertainty under the Trump administration. LevelTen reported strong demand for PPAs, allowing buyers and sellers to better manage contractual risks associated with tariff and tax code changes. This stability is attributed to a robust pipeline of projects and growing investor interest in renewable energy. [Read more.](#) (Recharge)

In a volatile new world, only the smartest renewables players will survive. Renewable energy companies must adapt quickly to a rapidly changing market, with only the most innovative and forward-thinking players expected to thrive. According to industry expert Adrian De Andres, the volatility of the current market demands that companies prioritize smart growth strategies, such as investing in emerging technologies and diversifying their portfolios. This approach will enable them to stay ahead of the competition and capitalize on new opportunities. [Read more.](#) (Recharge)

Viking to launch 'world's first' hydrogen-powered, zero emission cruise ship. Viking is set to launch the world's first hydrogen-powered, zero-emission cruise ship. The innovative vessel will use a combination of hydrogen fuel cells and batteries to reduce greenhouse gas emissions. This move comes as part of the company's efforts to meet stricter environmental regulations in Europe. The new ship is expected to significantly reduce carbon footprint compared to traditional diesel-powered ships. [Read more.](#) (BusinessGreen)

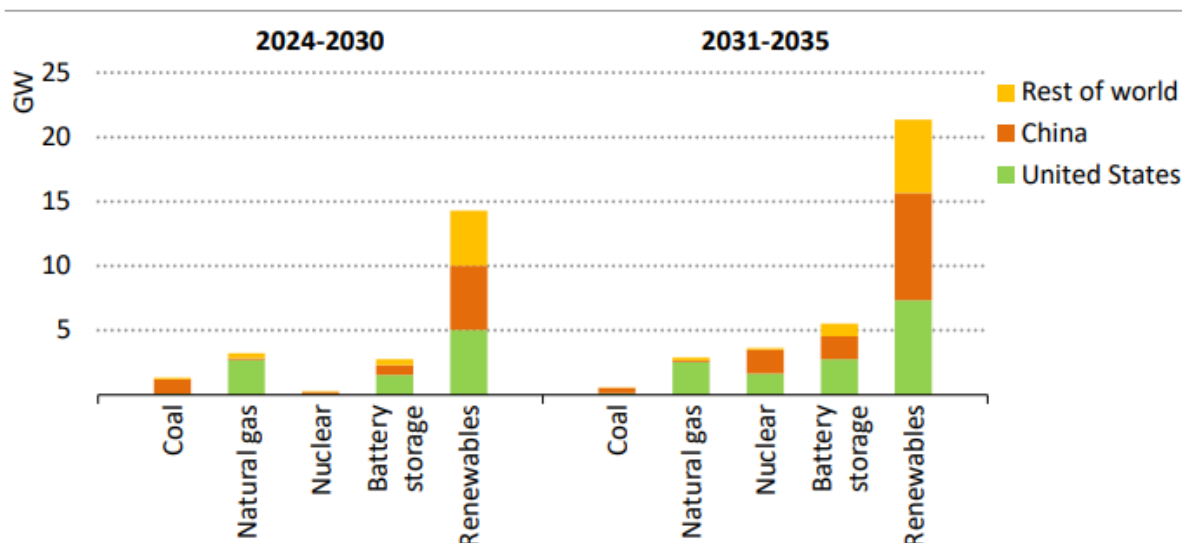

'An incredibly powerful tool': Can AI solve its own energy problem? Researchers have been exploring whether AI can solve its own energy problem, given its significant environmental impact. A recent conversation between BusinessGreen and ChatGPT revealed that the AI tool acknowledges its own energy consumption, particularly in training large language models. This issue is largely due to the massive computational resources required for model development and maintenance. [Read more.](#) (BusinessGreen)

Perovskite solar cells are coming for fossil fuels, part infinity. Researchers at Oxford PV have signed an exclusive patent licensing agreement with Trinasolar, allowing for the manufacture and sale of perovskite-based photovoltaic products in China. This partnership validates years of research on tandem perovskite solar cells, which combine perovskites with silicon to achieve lower costs and higher performance. The technology is expected to push the cost of solar power down further, potentially threatening the coal industry despite efforts by US President Donald Trump to salvage it. [Read more.](#) (CleanTechnica)

Power to the people: Plug-in solar now legal in Utah Homes. Utah has passed House Bill 340, allowing small, portable solar generation devices with a maximum power output of 1,200 watts to be plugged into homes. These devices must have anti-islanding protection and exempt residents from certain regulatory requirements. The bill simplifies the process for homeowners to adopt solar energy, particularly those in apartments or with limited space, aligning with trends in other regions like Germany. However, compliant products are currently not available, pending Underwriters Laboratories (UL) and National Electrical Code (NEC) certification. [Read more.](#) (CleanTechnica)

Data Center energy demand will not save the US coal industry. A new report from the International Energy Agency (IEA) suggests that coal will not be able to meet the growing energy demands of data centers in the US. Despite President Trump's efforts to prop up domestic coal production, the IEA projects that renewables will account for half of the growth in data center electricity demand by 2035, with geothermal energy potentially meeting up to 64% of expected demand growth by the early 2030s at lower costs than traditional clustering trends. [Read more.](#) (CleanTechnica)

Chart 5: Annual Average Data Centre Power Capacity Additions by Fuel and Region: Base Case Outlook for 2024–2030 and 2031–2035

Source: Energy and AI, IEA

Renewable Energy is still alive and kicking in the US. Despite a decline in federal support for renewables, global energy investors continue to pour money into US clean energy projects. Two recent deals demonstrate this trend: Sunrayer Renewables secured \$475 million for its Texas-based solar-plus-storage projects, while Excelsior Energy Capital closed a \$1 billion fund for investments in solar, energy storage, and wind projects across the US. These deals highlight overseas investors' confidence in the US renewable energy market's growth potential. [Read more.](#) (CleanTechnica)

We need 'double the energy at half the price' chemicals chief tells wind industry. The European chemical industry needs significant reductions in energy costs to remain competitive, according to the Chemicals Industry Council's (Cefic) director general. The industry requires "double the energy at half the price" to maintain its presence in Europe. This comes as steel giant Salzgitter's Groebler announced massive investments in low-carbon technologies, highlighting the importance of cost-effective solutions for a sustainable future. [Read more.](#) (Recharge)

'No winners in a trade war': Green industries brace for Trump tariff impact. Green industries are bracing for potential damage from Trump tariffs, which could hinder their growth. The UK government's Spring Statement and Spending Review must prioritize clean transition investment to support its growth mission. This is crucial as the sector is expected to create jobs and drive economic growth. However, a trade war could undermine these efforts and have negative consequences for the environment. [Read more.](#) (BusinessGreen)

Buffett utility reaffirms faith in US renewables with 4.3GW wind and solar expansion plan. PacifiCorp, a utility company owned by Warren Buffett's Berkshire Hathaway Energy, has announced plans to expand its renewable energy portfolio with 4.3GW of new wind and solar capacity. This move aligns with the trend among US utilities embracing renewables as a cost-effective and low-risk energy source. The expansion plan reflects PacifiCorp's commitment to sustainability despite the Trump administration's skepticism towards clean energy policies. [Read more.](#) (Recharge)

From backyards to balconies: The new face of solar power with bright saver. Bright Saver, a San Francisco-based nonprofit, is making solar power accessible to those who've been shut out of traditional systems by offering plug-in solar panels that can be installed on balconies, patios, or yards with just a standard outdoor electrical outlet. The system requires no roof space, permits, or big loans and can cover 20-40% of electricity needs. Pricing options include a monthly plan (\$34.90/month for six years) or an upfront purchase (\$1,849 plus installation). [Read more.](#) (CleanTechnica)

New EV charging hub opens in Pennsylvania. A new EV charging hub has opened in Harrisburg, PA, featuring fast chargers and solar power, with a total investment of \$2 million and construction spanning two years. The site includes 6 chargers and 12 ports, making it the largest in the region, and offers convenient amenities like food, restrooms, and 24/7 operation. It also features a solar canopy that contributes renewable energy back into the grid, alleviating range anxiety for EV drivers. [Read more.](#) (CleanTechnica)

Norway has more plans for the energy transition. Norway is taking a leading role in various aspects of the energy transition, including offshore wind and electric vehicle sales. Behind the scenes, innovators such as Elywhere are developing charger-plus-storage solutions to support fast charging stations, while Morrow Batteries is working on eco-friendly lithium-iron-phosphate batteries for heavy-duty applications. Other startups like Heimdall Power and Ocean Oasis are also contributing to the transition through grid optimization and wave energy harvesting, respectively. [Read more.](#) (CleanTechnica)

Surging solar power, booming EV Sales, & robotaxi safety. Solar power is surging globally, with record-breaking installations and declining costs. Electric vehicle (EV) sales are booming, with many countries setting new records for EV adoption. Additionally, robotaxi safety concerns have been raised after a fatal accident in California, highlighting the need for improved regulations and testing protocols. These stories demonstrate significant advancements in cleantech innovation and infrastructure development. [Read more.](#) (CleanTechnica)

Getting Big Batteries (BESS) & Pumped Hydro (PHES) to play well together. Mike Westerman from GHD emphasized that both Big Batteries (BESS) and Pumped Hydro (PHES) storage systems are necessary for a reliable grid. He expects BESS growth to slow down due to supply-demand imbalance, leading to stable battery prices in 2-3 years. PHES is unique due to its ability to provide long-duration energy storage and can complement BESS by offering faster response times to voltage disturbances and slower responses to frequency changes, making them a complementary solution for grid stability. [Read more.](#) (CleanTechnica)

Global Solar Outlook 2025–2029: SolarPower Europe Forecasts 1 TW Annual Installations By 2030. The global solar industry experienced a record-breaking year in 2024 with 597 GW of new capacity installed, marking a 33% increase over the previous year. China led the market with 329 GW, accounting for 55% of global installations, while India emerged as the third-largest market with a 145% increase from the previous year. The report forecasts that solar power will continue to grow, with 1 TW annual installations by 2030 and solar providing over 20% of global electricity demand by then. [Read more.](#) (CleanTechnica)

Solar gets cheaper, systems get bigger: EnergySage report maps a shifting market. The EnergySage Solar & Storage Marketplace Report reveals a shifting market in the US residential solar sector. Despite a 31% year-over-year decline in installations due to macroeconomic pressure, consumer interest remains strong, especially with storage. Record-low prices for solar and storage systems have been achieved, driven by falling equipment costs and intensified competition. Tesla's Powerwall 3 has disrupted the market, increasing its share of the storage market to 63%. [Read more.](#) (CleanTechnica)

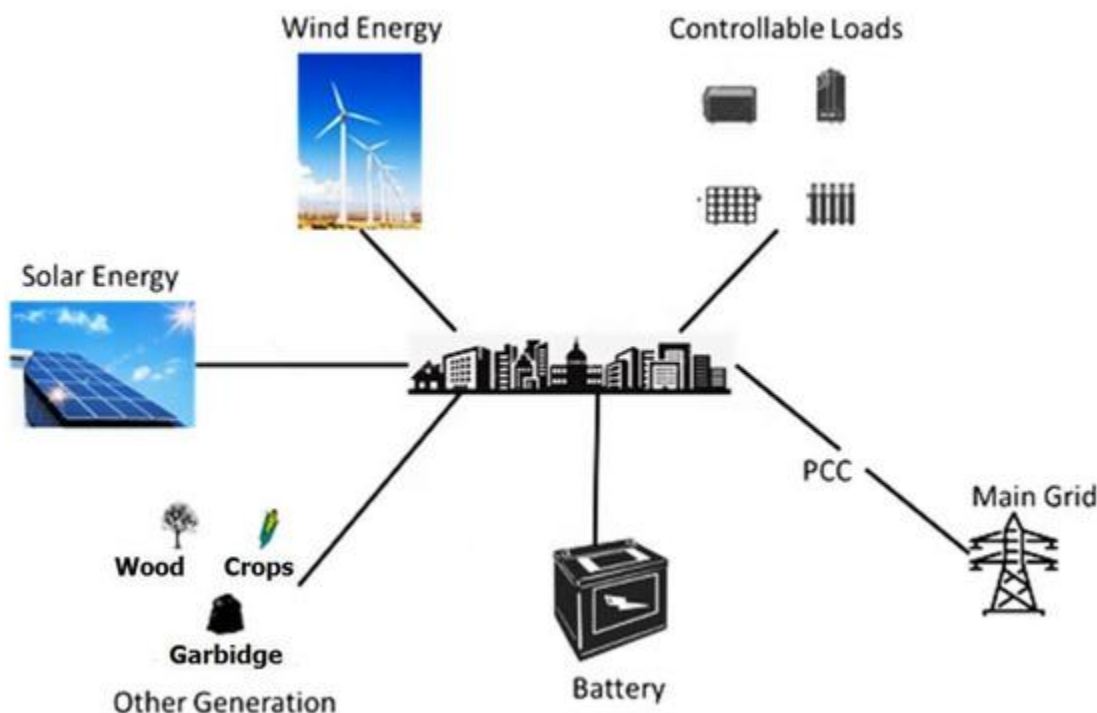

SMMT: Second-hand EV sales grow by more than 50 per cent. The number of second-hand battery electric cars sold in Q1 2023 increased by 58.5% year-on-year, with BEVs becoming the fastest-growing segment of the used car market. This growth is attributed to rising consumer interest and increasing availability of affordable EV models. The Society of Motor Manufacturers and Traders (SMMT) reported a significant surge in second-hand EV sales, outpacing other used car segments. [Read more.](#) (BusinessGreen)

Raise caps on grid spend and profits after blackout, says Iberian power giant. The head of Portugal's largest utility company has called for an increase in the allowed profit margins for grid operators in Spain following a recent blackout. The Iberian power giant believes there is room for improvement in the country's regulated energy market, which currently

limits profits and investment in infrastructure. This move could lead to improved reliability and efficiency in Spain's power grid. [Read more.](#) (Recharge)

Microgrids could enhance grid resilience. Rory McIlmoil, a researcher at NREL's Grid Planning and Analysis Center, shares his personal experience with Hurricane Helene to highlight the importance of microgrids in enhancing grid resilience. He notes that microgrids can provide reliable power during emergencies, especially for critical services like fire stations and medical facilities. Microgrids can operate in island mode or be connected to the main grid, utilizing distributed energy resources and battery storage systems. Utilities are increasingly interested in incorporating microgrids into their planning to stabilize local grids and reduce strain on distribution networks. [Read more.](#) (CleanTechnica)

Chart 6: Microgrid Systems

Rooftop Solar Is Winning (Trump Is Losing). US President Trump's hostility towards clean energy has dealt a significant blow to the domestic offshore wind industry, but rooftop solar remains resilient. Despite a slowdown in global activity and financial struggles among top companies like Tesla and SunPower, leading solar firm Sunrun is launching an innovative incentive plan called "Sunrun Flex" to equip households with rooftop panels and home energy storage systems. The new service adapts to changing energy needs, providing predictable rates and incentives for energy conservation. [Read more.](#) (CleanTechnica)

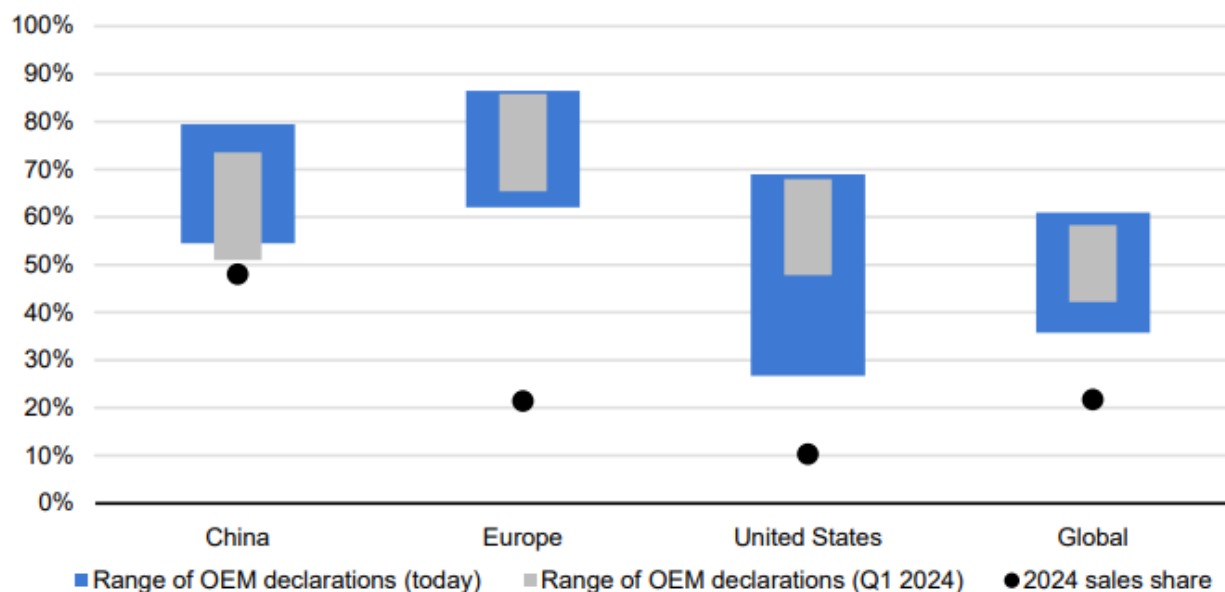

The virtual power plant wars heat up in Texas. Shell's subsidiary, sonnen, has launched a statewide virtual power plant (VPP) in Texas in collaboration with Abundance Energy, Energywell Technology Licensing, and SOLRITE Energy. The VPP aims to store excess energy during low demand periods and sell it back to the grid when needed, reducing reliance on gas peaker plants and saving ratepayers money. With 60 megawatt-hours already accounted for and 5,000 customers committed, sonnen expects the VPP to surpass Tesla's recently launched VPP in Texas by the end of next year. [Read more.](#) (CleanTechnica)

NREL-Led research effort adds salt, boosts performance of perovskites. Scientists at the National Renewable Energy Laboratory (NREL) have improved perovskite solar cells by replacing the fullerene layer with an ionic salt, boosting their performance, efficiency, and durability. The research led to a three-fold increase in mechanical strength

and a lab efficiency of 26.1%, with minimal degradation after 2,100 hours of operation. This breakthrough points to a promising approach for advancing perovskite photovoltaic technologies toward commercialization. [Read more.](#) (CleanTechnica)

Over 70 per cent of businesses to push forward with electrification. A recent study reveals that over 70% of businesses intend to prioritize electrification, emissions reduction, and energy cost management within the next three years. The report highlights growing industry momentum towards sustainability, driven by increasing environmental concerns and economic incentives. Key findings include a significant increase in investment for green technologies and a shift towards renewable energy sources. [Read more.](#) (BusinessGreen)

Chart 7: Range Of Electric Car Sales Shares Based On Automaker Electrification Targets, 2030

Source: IEA Global EV Outlook , OEM = original equipment manufacturer. Q1 2024 OEM declarations reflect the interpretation of automaker targets as presented in the Global EV Outlook 2024. The range today reflects OEM announcements as of the end of Q1 2025. The relative market share of OEMs is held constant unless the OEM has EV volume targets rather than sales share targets.

Sources: IEA analysis based on company announcements and data from EV Volumes and Marklines

'A common-sense decision': Government to make solar panels mandatory for new homes in England. The UK government plans to make solar panels mandatory for all new homes in England from 2027. This decision aims to reduce household energy bills by approximately £1,000 per year. The policy is expected to benefit over a million households and contribute to the country's goal of reducing carbon emissions. The move is seen as a "common-sense decision" that will help homeowners save on energy costs while also promoting renewable energy use. [Read more.](#) (BusinessGreen)

Regulatory Updates

Trump's tariff hike casts shadow over US energy storage market, analysts warn. The US energy storage market is facing uncertainty due to President Trump's recent tariff hike on imported lithium-ion batteries. Analysts warn that the move will increase costs and potentially slow down growth in the sector, which has seen significant investment in recent years. The tariffs are expected to impact companies such as Tesla and LG Chem, leading to higher prices for consumers and reduced competitiveness. [Read more.](#) (BusinessGreen)

Glad it stayed out of US, but Enercon chief says Trump's tariffs still make waves. Enercon CEO Ulrich Schulze Südhoff welcomes the company's decision to avoid US market due to tariffs, but notes that President Trump's trade policies still cause ripples globally. He also asserts that there are no signs of a slowdown in Germany's energy transition

under the new government led by Merz. The executive remains optimistic about the sector's future despite ongoing challenges. [Read more.](#) (Recharge)

Tariffs could delay renewables and make the US irrelevant. Tariffs imposed by the US could delay renewable energy growth and make the country irrelevant in the global clean energy market. Experts Kingsmill Bond and Jeff Currie argue that as confidence in fossil fuel imports erodes, countries will turn to domestic alternatives like renewables and electrification. Tariffs have disrupted trade, making imported fossil fuels less reliable, and nations are seeking diversified energy mixes for security, driving a slower transition to cleaner energy sources. [Read more.](#) (CleanTechnica)

Government faces High Court challenge over 'highly dangerous' Jet Zero Strategy. The UK government's Jet Zero Strategy is facing a High Court challenge from environmental groups who claim it promotes the expansion of flight travel despite being "highly dangerous" for the environment. The strategy aims to reduce emissions from aviation, but critics argue it prioritizes economic growth over climate action and will lead to increased air travel. [Read more.](#) (BusinessGreen)

Contract Chaos: Texas' retroactive energy bill shakes market trust. Texas has introduced Senate Bill 715, which requires renewable power plants to retroactively guarantee power availability through dispatchable backup power. This bill undermines contractual sanctity, eroding Texas' reputation as a stable market for investment. The move creates uncertainty not just for renewables but also for all investors in the state, potentially increasing capital costs across sectors. Similar interventions by conservative governments in Ontario and Alberta have led to negative outcomes, including damage to investment credibility and increased risk premiums. [Read more.](#) (CleanTechnica)

Reality check: Why renewables could have a growth path under Trump after all. Renewable energy projects are advancing on federal lands in the US, despite President Trump's anti-renewables stance. A Canadian-owned project is one example, showing flexibility in the face of growing demand for clean energy. This trend suggests that the industry may still have a growth path under the current administration, contradicting initial concerns about its prospects. [Read more.](#) (Recharge)

Capital Markets

Trump halts funding to US floating wind pioneer on cusp of prototype launch. President Trump has halted a \$12 million grant to US floating wind pioneer, Ocean Renewable Energy Company (OREC), just as it was set to launch its prototype. The funding suspension is reportedly linked to a dispute between the company and University of Maine over transgender athletes. This move aligns with Trump's broader efforts to undermine the clean energy sector, which has been a target of his administration's policies. [Read more.](#) (Recharge)

RWE CEO says US offshore wind 'stopped', spells out terms for new renewable investments. RWE CEO Markus Krebber has stated that US offshore wind projects have effectively been halted, citing "political developments" as the reason. He also expressed optimism about onshore wind and solar investments in the US, highlighting rising power demand as a positive factor. However, Krebber emphasized that new renewable investments will require attractive terms, implying that current conditions are not favorable for such projects. [Read more.](#) (Recharge)

Defra confirms £45m funding for low carbon farming innovations. The UK's Department for Environment, Food and Rural Affairs (Defra) has confirmed £45m in funding for low-carbon farming innovations. The funding will support projects that enhance crop resilience, protect nature, and boost food production. Innovations such as regenerative agriculture, precision farming, and carbon capture technologies are among those eligible for the funding, aimed at reducing greenhouse gas emissions from agriculture. Source: Clean Technica

Stonepeak upbeat on US renewables after \$340m Repsol deal. Stonepeak, a private equity firm, is optimistic about the US renewable energy market following its \$340 million deal with Repsol. The investment will support the development of cost-effective and sustainable electricity in the country. Stonepeak aims to deliver "much-needed" power to the domestic grid through this partnership. [Read more.](#) (Recharge)

SunTrain re-imagines battery storage & clean energy. SunTrain is a company that aims to revolutionize battery storage and clean energy by utilizing existing rail infrastructure to transport grid-ready electricity. The innovative solution, dubbed "Trainmission," involves storing green energy in customized battery containers on railroad cars, which can then be transported over existing tracks to link generation sites with congested substations, bypassing traditional transmission systems. This approach addresses decades-long transmission bottlenecks and enables efficient distribution of renewable energy. [Read more.](#) (CleanTechnica)

Nordex profitability spikes as orders grow. Nordex, a German wind turbine manufacturer, has seen its profitability increase due to growing orders. The company attributes the improvement to lower installation and production costs, which were affected by earlier timing decisions. Despite a dip in sales, Nordex's order intake increased significantly, boosting its financial performance. This trend is expected to continue as the demand for renewable energy solutions remains strong globally. [Read more.](#) (Recharge)

NextEra CEO calls for US 'energy realism and pragmatism' to meet surging power demand. NextEra Energy CEO John Ketchum advocates for "energy realism and pragmatism" in the US to meet growing power demand. He argues that the country cannot rely solely on a few expensive technologies like gas and nuclear, which take longer to build than renewables. Instead, he suggests embracing a diverse energy mix, including solar and wind power, to ensure a reliable and affordable energy supply for the future. [Read more.](#) (Recharge)

GE Vernova CEO talks wind power prospects and tariff impacts. GE Vernova's CEO, Scott Strazik, discussed the future of wind power and its impact on tariffs in an interview. He highlighted that the US is expected to see a significant increase in wind energy production, driven by declining costs and increasing demand. However, he also noted that rising tariffs on imported components could hinder growth, particularly for smaller operators. Strazik emphasized the need for policy support to maintain competitiveness and drive innovation. [Read more.](#) (Recharge)

Deep Fission to build nuclear power plants below the surface of the Earth. Deep Fission proposes building 15 MW nuclear power plants one mile below the Earth's surface, addressing concerns about nuclear waste disposal and cost overruns. The company claims its technology reduces construction costs by 80% and eliminates the need for massive concrete structures, which contribute to carbon dioxide emissions. By using existing pressurized water reactor technology in a borehole, Deep Fission aims to provide clean energy without the environmental drawbacks of surface-level nuclear power plants. [Read more.](#) (CleanTechnica)

Microsoft inks deal with CO280 to remove carbon from US pulp and paper mills. Microsoft has partnered with CO280 to remove carbon from US pulp and paper mills through a 12-year deal. The agreement involves purchasing 3.69 million tonnes of CO2 credits from CO280, a CDR specialist. This is considered one of the largest deals in the industry, demonstrating Microsoft's commitment to reducing its carbon footprint. The project aims to capture CO2 emissions from mill operations and convert them into valuable products. [Read more.](#) (BusinessGreen)

Equinor folds renewables business into new power unit. Equinor, the Norwegian oil and gas major, is reorganizing its renewable energy business by folding it into a new power unit. The move will combine Equinor's wind, solar, and hydropower assets with its flexible gas and storage operations. This integration aims to create a more competitive and efficient platform for generating electricity from both fossil fuels and renewables. [Read more.](#) (Recharge)

RWE and Enercon team up for onshore wind partnership in Europe. RWE, a leading utility company, has partnered with Enercon, a prominent turbine manufacturer, for an onshore wind partnership in Europe. The companies are working together to strengthen the continent's renewable energy sector and reduce reliance on imports from Asia. The deal is part of RWE's efforts to diversify its European supply chain, but the volume of turbines Enercon will supply was not disclosed. [Read more.](#) (Recharge)

SolarBank Corp. Understands the Importance of Energy Storage. SolarBank Corp. emphasizes the importance of energy storage systems (BESS) in enabling 24/7 power from intermittent renewable sources like solar and wind. The global BESS market is projected to grow from \$7.8 billion in 2024 to \$25.6 billion by 2029, with a CAGR of 26.9%.

SolarBank has entered the Canadian battery storage market with its SFF-06 project and acquired Solar Flow-Through Funds Ltd., expanding its renewable assets and development pipeline. The company prioritizes community partnerships and sustainability in its projects. [Read more.](#) (CleanTechnica)

'Making solar energy affordable for the many, not the few': E. ON snaps up solar installation group Eco2Solar. Energy giant E. ON has acquired residential solar installation group Eco2Solar, aiming to make solar energy more accessible and affordable for homeowners. The acquisition is part of E. ON's strategy to increase flexibility in solar installations and reduce costs for customers. The move is expected to benefit thousands of households by providing them with a wider range of solar options at competitive prices. [Read more.](#) (BusinessGreen)

BP chair to step down amid shift from renewables. BP's chairman, Helge Lund, will step down as the company shifts its focus away from renewable energy. The move marks a significant departure from the previous strategy under Bernard Looney, who emphasized growth in low-carbon businesses. BP is now seeking a new chairman to lead the transition, with Lund citing the need for fresh perspectives and expertise to navigate the changing industry landscape. [Read more.](#) (Recharge)

Coal giant nears signing 'one of world's largest' renewables deals. An Indian state-owned coal giant is nearing a significant deal in the renewable energy sector. The company has entered into a non-binding agreement with a green ammonia producer to develop one of the world's largest clean power projects. The plan involves massive investments in solar and wind power, as well as green hydrogen production. This move marks a major shift for the coal giant towards cleaner energy sources, potentially setting a new precedent for industry players. [Read more.](#) (Recharge)

RWE, SSE and Equinor winners from new UK plan to boost offshore wind. The Crown Estate has unveiled a plan to boost the UK's offshore wind capacity, aiming to deliver more projects by 2030. RWE, SSE, and Equinor are among the winners of this new initiative, which will increase the capacity of existing projects. This move is expected to support the UK's renewable energy and clean power targets, driving growth in the sector and creating jobs. The plan focuses on accelerating project delivery and enhancing supply chain efficiency. [Read more.](#) (Recharge)

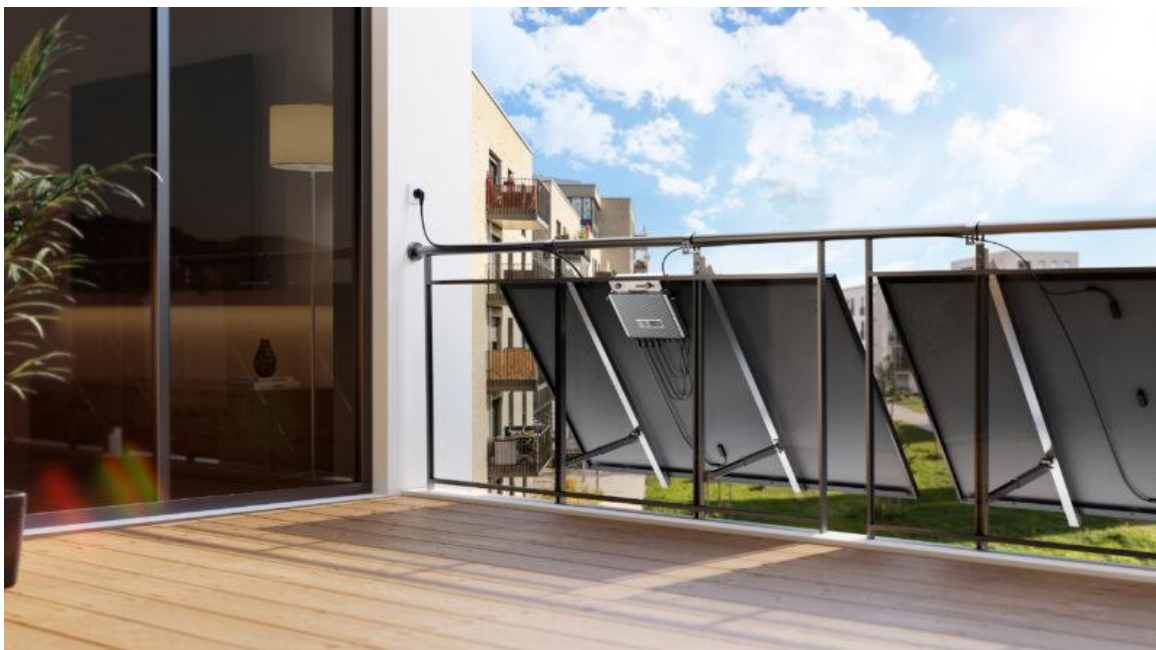

Ecotricity debuts dynamic energy pricing for homes with renewables installed. Ecotricity has introduced dynamic energy pricing for homes with installed renewables, allowing customers to sell excess energy back to the grid. This move comes as a new study by EY warns that the drive to electrify is causing concerns over security of supply and volatile energy costs. The study highlights potential risks to energy stability due to increased reliance on intermittent renewable sources. [Read more.](#) (BusinessGreen)

EcoFlow STREAM Ultra: A game-changer for plug-&-play home solar systems. EcoFlow has unveiled the STREAM Ultra Plug-and-Play Home Solar System, a modular and DIY-friendly residential energy solution designed for homeowners, renters, and multi-family building residents. The system features a 1.92kWh lithium iron phosphate battery with built-in microinverter, allowing users to connect via a standard wall outlet and start saving on electricity bills. It supports up to 11.52kWh of storage, dual-mode solar input, and AI-driven energy management through EcoFlow OASIS. [Read more.](#) (CleanTechnica)

New Home EV Charging solution for fleet managers. Fleet managers are embracing home EV charging as a convenient and cost-effective way to electrify their vehicles. According to Cox Automotive, 87% of fleet owners expect to add EVs in the next five years, with those already using EVs having a 90% likelihood of acquiring more. Siemens has launched Depot360 Home Charging Reimbursement, a system that accurately reimburses employees for home EV charging, even when multiple vehicles use the same port. This innovation streamlines fleet electrification and reduces costs. [Read more.](#) (CleanTechnica)

Blink Charging & create energy team up to offer solar-powered EV charging solution. Blink Charging and Create Energy have partnered to offer an integrated solar-powered EV charging system that combines Blink's Level 2 and DC fast chargers with Create Energy's Nanogrid technology. The solution features solar canopies, battery storage systems, and energy management software, enabling sites to reduce their dependence on grid electricity and operate independently from the local grid during peak demand times. This collaboration aims to simplify EV infrastructure installation and enhance competitiveness in incentive programs, paving the way for sustainable and resilient charging networks. [Read more.](#) (CleanTechnica)

California's energy revolution: Sunrun quadruples virtual power plant ahead of summer. California's energy grid is getting a boost from Sunrun's expanded CalReady virtual power plant, which now links 75,000 home solar batteries, quadrupling its size since last year. The distributed network can supply up to 375 megawatts of peak power, enough for around 280,000 households. This decentralized approach provides greater resilience and flexibility, reducing risks associated with traditional centralized power facilities. Homeowners earn compensation for allowing Sunrun to utilize stored solar energy during high-demand periods. [Read more.](#) (CleanTechnica)

NextEra CEO says tariffs won't derail huge US renewables growth plans. NextEra Energy's CEO, Jim Robo, asserts that planned US renewable energy growth will not be hindered by tariffs. The company has a low exposure to international trade policies in its supply chain, which is a significant factor in its ability to expand its operations. NextEra aims to increase its renewable energy capacity to 45 gigawatts by 2025, representing a major step forward for the US clean energy sector. [Read more.](#) (Recharge)

Energy Technology innovation partnership project opens applications to support coastal, remote, & island communities. The US Department of Energy's Energy Technology Innovation Partnership Project (ETIPP) is now accepting applications for coastal, remote, and island communities to receive energy planning and technical support. ETIPP connects these communities with experts who provide strategic analysis and planning to improve local energy systems' affordability, reliability, and security. Selected communities can receive up to two years of technical assistance and funding (up to \$50,000) to implement their plans. Applications are due by July 27, 2025. [Read more.](#) (CleanTechnica)

Fund Description

The CTEC Fund is an environmentally focused investment opportunity, designed to mirror a global index of companies driving technological advancements that mitigate environmental harm. This fund commits at least 80% of its assets to securities within the underlying index, in addition to American Depositary Receipts (ADRs) and Global Depositary Receipts (GDRs) linked to those securities. The underlying index comprises businesses primarily dedicated to Cleantech, including renewable energy, energy efficiency, smart grid solutions, lithium-ion batteries, fuel cells, and pollution prevention. These companies are carefully selected based on their generation of at least 50% of revenues from Cleantech-related activities and must meet specific market capitalization and liquidity criteria. The fund aims to harness the growth potential of Cleantech, and any modifications to the 80% investment policy necessitate a 60-day prior notice to shareholders. With eligibility spanning countries such as the United States, Japan, China, the United Kingdom, and others, this fund offers diversification for eco-conscious investors seeking Cleantech exposure.

AUM (\$ Billion)	Shares Outstanding (#)	Fund Flows (1M, \$)	Fund Flows (YTD, \$)
1.31	111 M	-8 MM	-156 MM

Fund Description

The ICLN Fund offers investors exposure to a carefully curated selection of global companies at the forefront of the clean energy sector. This fund seeks to replicate the performance of the S&P Global Clean Energy Index™, comprising approximately 100 clean energy-related companies. To be eligible for inclusion in this index, companies must meet specific criteria, including a minimum total market capitalization of \$300 million, float-adjusted market capitalization of \$100 million, and a median daily value traded of \$3 million over six months, all on developed market exchanges. The index construction process involves rigorous screening, utilizing classifications such as the Global Industry Classification Standard (GICS) and FactSets Revere Business Industry Classification System (RBICS), along with environmental, social, and governance (ESG) considerations. Clean energy exposure scores are assigned based on a company's primary business, with additional evaluation of carbon-to-revenue footprint to ensure alignment with sustainable and environmentally responsible practices. The result is a diversified fund that offers investors an opportunity to participate in the global clean energy revolution while adhering to stringent ESG criteria.

IMPORTANT DISCLOSURES

This third-party research report has been prepared by Intro-act and PartnerCap Securities; LLC (henceforth "PartnerCap") has reviewed the said research report for compliance with the applicable provisions of the relevant regulations. Based on representations of the research provider, PartnerCap has a reasonable belief such research is objective and reliable and is not in possession of information that would prove otherwise. PartnerCap Securities, LLC and Intro-act have common ownership.

PartnerCap shall not be considered to have distributed a third-party research report where the research is an independent third-party research report and is made available (a) upon request; (b) through a member-maintained website; or (c) to a customer in connection with a solicited order in which the registered representative has informed the customer, during the solicitation, of the availability of independent research on the solicited equity security and the customer requests such independent research.

In addition, PartnerCap assumes no warranty, liability or guarantee for the current relevance, correctness or completeness of any information provided. Furthermore, PartnerCap assumes no liability for any direct or indirect loss or damage or, in particular, for lost profit, which you may incur as a result of the use and existence of the information, provided within the report. This electronic message and any attachments has been provided only to the person or entity to which it is addressed and has been provided for informational purposes only and should not be used or construed as an offer to sell, a solicitation, an offer to buy, or a recommendation for any security and is not purported to be tailored to any particular investor and may not be re distributed.

Other than disclosures relating to PartnerCap and its affiliates, the information herein is based on sources we believe to be reliable but has not been independently verified by us and does not purport to be a complete statement or summary of the available data. No representation is made that such information is accurate in all material respects, complete or up to date. PartnerCap is under no obligation to update, modify or amend the information and it does not accept any liability for any loss or damage, however caused, arising from any errors, omissions, or reliance on any information or views presented.

Information and securities mentioned may reflect a third party's independent opinions and are not recommendations of PartnerCap. The commentary is a general discussion based on short term market factors or current market trends, and may differ from, or be inconsistent with the views of other sales and trading personnel within the Firm or the long-term views of research analysts employed by PartnerCap.

The third-party research sourced information is the exclusive property of Intro-act; and without its permission, this information and any other intellectual property may not be reproduced, re-disseminated or used to create any financial products, including any indices. This information is provided on an "as is" basis. The user assumes the entire risk of any use made of this information. The third-party research analyst, its affiliates and any third party involved in, or related to, computing or compiling the information hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of this information.

Neither PartnerCap or Intro-act beneficially own 1% or more of any class of common equity securities of the subject company covered in the said research report.

Intro-act Disclosures

Analyst Certification: I, Shreya Chaware, certify that the views expressed in the research report accurately reflect my professional views about the subject securities or issues. Intro-act issued this report and may seek fees for the assistance with investor targeting, access, and further investor preparation services. Intro-act will not seek remuneration for any investment banking service or investment advice.

Accuracy of content: All information used in the publication of this report has been compiled from publicly available sources who are believed to be reliable. However, the issuer and related parties, as well as Intro-act, do not guarantee the accuracy or completeness of this report, and have not sought for this information to be independently verified. Opinions contained in this report represent those of the Intro-act analysts at the time of publication. Forward-looking information or statements in this report contain information that is based on assumptions, forecasts of future results, and estimates of amounts not yet determinable, and therefore involve known and unknown risks, uncertainties, and other factors that may cause the actual results, performance, or achievements of their subject matter to be materially different from current expectations.

AI-generated content: Content in this research report is AI-generated. Intro-act employs its proprietary AI research system for content-generation, based on a universe of credible and authentic source documents. The system functions under an overall manual supervision, and thus the creative control over the content generated by the system lies with its human authors. The AI content is not mere "mechanical reproduction" and instead is the result of the human author's "own original mental conception, to which [the author] gave visible form." The AI-generated content from the system is sufficiently modified so as to meet the standards for copyright protection. Intro-act thus claims that the work as a whole constitutes an original work of human authorship, and the content in this research report has sufficient human authorship to support a copyright claim, according to the Copyright Registration Guidance, published by the U.S. Copyright Office on 03/16/2023.

Exclusion of Liability: To the fullest extent allowed by law, Intro-act, Inc. shall not be liable for any direct, indirect, or consequential losses, loss of profits, damages, or costs or expenses incurred or suffered by you arising out or in connection with the access to, use of, or reliance on any information contained in this note.

No personalized advice: The information that we provide should not be construed in any manner whatsoever as personalized advice. Also, the information provided by us should not be construed by any subscriber or prospective subscriber as Intro-act's solicitation to affect, or attempt to affect, any transaction in a security. The securities described in the report may not be eligible for sale in all jurisdictions or to certain categories of investors.

Investment in securities mentioned: Intro-act has a restrictive policy relating to personal dealing and conflicts of interest. Intro-act, Inc. does not conduct any investment business and, accordingly, does not itself hold any positions in the securities mentioned in this report. However, the respective directors, officers, employees, and contractors of Intro-act may have a position in any or related securities mentioned in this report, subject to Intro-act's policies on personal dealing and conflicts of interest.

Copyright: © 2025 Intro-act, LLC

Intro-act is not registered as an investment adviser with the Securities and Exchange Commission. Intro-act relies upon the "publishers' exclusion" from the definition of investment adviser under Section 202(a) (11) of the Investment Advisers Act of 1940 and corresponding state securities laws. This report is a bona fide publication of general and regular circulation offering impersonal investment-related advice, not tailored to a specific investment portfolio or the needs of current and/or prospective subscribers. As such, Intro-act does not offer or provide personal advice, and the research provided is for informational purposes only. No mention of a particular security in this report constitutes a recommendation to buy, sell, or hold that or any security, or that any particular security, portfolio of securities, transaction, or investment strategy is suitable for any specific person.
