

# Electric Transportation Ecosystem

## Georgia: A Hub for Electric Transportation

Electric vehicles (EVs) are the future of the automotive industry. As automotive manufacturers commit to adding electric vehicles to their fleets, Georgia is positioning itself as a hub for electric vehicle, battery, and other support operations for the electric transportation industry.

Since 2018, Georgia has attracted 43 EV-related operations and expansions for a total 32,000 jobs and \$27.5 billion in capital investment. SK innovation led the way with a \$2.6 billion electric battery manufacturing facility. And most recently, Hyundai Motor Group's suppliers are arriving in Georgia. In 2023 and 2024, 20 Tier 1 & 2 Hyundai suppliers located in Georgia, projected to create more than 7,000 jobs and \$4.5 billion in capital investment.

### EV Announcements in Last 2 Years

| Company                              | Jobs Announced | Capital Investment | County    | Type                                                           | Year |
|--------------------------------------|----------------|--------------------|-----------|----------------------------------------------------------------|------|
| Sewon America                        | 740            | \$300M             | Effingham | Stamped components and decorative trim                         | 2023 |

### Georgia Tech leads EV innovation

Strategic Energy Institute:

- Developing the technologies that are enabling more equitable, lower cost, and cleaner generation, storage, distribution, and utilization of energy
- Electrochemical Energy Storage and Conversion Initiative

Manufacturing Institute:

- Partnering with GE and Ford Motor Co. to study ways to add greater efficiencies to electric driving and charging performance

# Georgia's Commitment to EV Expansion

In early 2021, Southern Company joined 5 other energy companies to create the Electric Highway Coalition to collaborate on a network of DC fast chargers from the Atlantic Coast through the Midwest and South and into the Gulf and Central Plains regions. The coalition will provide drivers with effective, efficient, and convenient charging options to enable long-distance electric travel.

## Electric Mobility and Innovation Alliance

In 2021, Georgia Governor Brian Kemp formed the Georgia Electric Mobility and Innovation Alliance (EMIA). Led by the Georgia Department of Economic Development, EMIA is a statewide alliance that consists of partners ranging from government, industries, electric utilities, non-profits, and other stakeholders. They all share the common goal of growing the electric mobility ecosystem in the state and strengthening Georgia's position in electric vehicle-related manufacturing and innovation.

## University of Georgia's Electric Mobility Initiative

With the goal of enhancing research, education, and outreach opportunities, UGA established a campus-wide Electric Mobility Initiative that will provide seed funding for new projects, including the development of educational programs such as the E-Mobility Certificate, and bring together thought leaders to discuss innovative approaches to electric mobility across Georgia and the region.

## Augusta Tech's Automotive Service Training Center

In November 2022, the Knox Foundation announced a donation of \$1 million to Augusta Technical College for the development of the college's new automotive service training center.

## The Ray

To create the world's first sustainable highway, The Ray is rethinking the role of roadway connectivity with a "net-zero" mission: zero waste, zero carbon, zero impact. The Ray has partnered with leading research organizations to develop "EV Charging Lanes." By wiring roads to create an electromagnetic field that can charge a car battery, The Ray is finding ways to give EV drivers the ability to charge their vehicles while still in motion — no stopping required.
